Full product description

Bandage for steel tape (10-20mm) RATTLE

The bandage is used for stretching steel tape, used for mounting pole holders, accessories, etc.

This bandage has a ratchet and works with stainless steel tapes with a width of 10-20mm. After proper placement of the tape, its tension is carried out by winding around the pin with a notch. After tensioning the tape we cut with a knife, which is equipped with a bandage.
