Manufacturer: InterOpto

Referention number: IO-CL-FC6S1

Information:

The tool necessary to properly cut the forehead of the fiber at right angles in order to make the connection with a fiber welder.

Full product description

The tool necessary to properly cut the forehead of the fiber at right angles in order to make the connection with a fiber welder. A diamond rotary knife with 16 cutting positions is mounted, we will make about 2000 cuts on each position and in addition we can also use half positions.

The semi-automatic offers us the automatic return of the trolley with the knife to the starting position after opening the knife after cutting.
