Manufacturer: InterOpto

Referention number: IO-CL-FC6S

Full product description

The tool necessary to properly cut the forehead of the fiber at right angles in order to make the connection with a fiber welder. A diamond rotary knife with 16 cutting positions is mounted, we will make about 2000 cuts on each position and in addition we can also use half positions.

The FC-6S also has a fiber waste container that automatically throws cut-off fibres into the container, making it easier to keep the workplace clean.
